National Modules
Do you know what is available?

The National Suite is a group of modules that are available free of charge to New Zealand health professionals. Having started with only a few select modules in 2007 the National Suite now incorporates 10 highly useful tools which have been developed in conjunction with organisations such as ACC, Pharmac, MedSafe and The Ministry of Health.

The National Suite includes:

- Adverse Reaction Reporting
- Antenatal/Postnatal Depression
- Childhood Asthma
- Depression (Adults, Elderly, Young People)
- eACC18
- Hazardous Substances and Lead Notifications
- Isotretinoin
- INR Monitoring

For more information on the National Suite get in touch with our team today.

Smarter Health Data
bestpractice Intelligence

BPI is a suite of tools allowing those involved in primary care to monitor and manage their progress towards agreed health goals. These targets may be clinically driven for quality of care or performance driven to maximise funding. Users are able to analyse patients by chronic condition, view current management of a patient group and provide exception reporting. This assists practices in reaching PPP targets by viewing their current status against the target, the number required to meet targets and provides a list of eligible patients. A recall can then be directly generated from within BPI to populate MS.
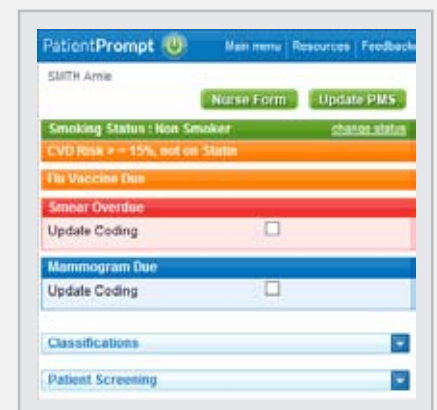

Talk to us about how we can use BPI to help you.

Patient Prompt

Screen Resize Functionality Now Available

Thanks to a Medtech software upgrade users are now able to permanently resize the Patient Prompt to suit their own preference.

This long awaited feature is now available to any practice running Medtech 20.10.

Simply alter the size of the window to suit, and when the prompt opens in the future it will automatically remember the last used size and position

eACC18

Ensuring efficiency for patients and providers

Use of the eACC18 medical certificate – which is the core platform and drives the new services - is rising quickly as GPs become familiar with the online form and see the benefits it offers when planning return to work after injury.

In March alone there were 2,496 distinct users who processed an eACC18, and with constant improvements being made it really is an effective and efficient experience for patients and practitioners.

FACTS
& figures

20,406
The number of **e-Referrals** sent in March 2014 alone - an all-time monthly record.

2,350,000
The total number of *bestpractice* **modules** processed since its release in 2007.

14,744
The number of **eACC18** forms sent in March 2014 alone - an all-time monthly record.

51,297
The number of **Common Forms** processed from January to March 2014.

bestpractice Primary Suite
Full Functionality for Primary Care

The Primary Care suite is the largest module collection available, containing 12 of the 23 modules (the remaining ten modules are available free of charge in the Nationally Funded suite). Purchasing this suite gives your practice access to the full functionality of *bestpractice* - everything from the useful calculators in the Clinical Toolkit to the ever popular CVD modules.

The full list of modules is:

- Cardiovascular Disease (CVD) Management
- Cardiovascular Disease (CVD) Quick Screen
- Care Plans
- Chronic Kidney Disease
- Clinical Tool Kit
- Common Form
- Diabetes Review

- Education
- Exercise Prescriptions
- Healthy Children
- Patient Prompt
- Well Child Six Week Check
